Table of Contents

1. Highlights

Chameleon Internet Starter Kit 4.6 is a great way to get started on the Internet. With NetManage, you can expect a reliable and efficient network connection and all the latest Internet features.

This Chameleon Internet Starter Kit release includes the following applications: WebSurfer, Mail, NEWTNews, Automatic Internet, Custom, Dialer, Mail Administration, Ping, and a TCP/IP communications stack.

*The Chameleon Internet Starter Kit is an introduction to NetManage's **Internet Chameleon**, the most comprehensive Internet solution for mobile professionals. Internet Chameleon goes beyond surfing the Internet to making it work for you by using tools that allow you to manage and integrate valuable information. By upgrading your Starter Kit to Internet Chameleon, you get valuable Internet applications like FTP, ECCO Internet Address Book, a full Web publishing kit, and more. Internet Chameleon is available from retail stores near you.*

WebSurfer
WebSurfer lets you browse hypertext documents published on World Wide Web servers.

Mail

Mail lets you send and receive electronic mail.

Mail Administration

Mail Administration provides additional functions for managing Mail.

NEWTNews

NEWTNews lets subscribe to news groups on the Usenet, and to read and post articles.

Automation Internet

Automatic Internet signs you up for a new Internet account and configures any existing accounts.

Custom

Custom lets you set up and configure your Internet connection.

Dialer

Dialer lets you connect interfaces to the Internet and modify phone numbers easily.

Ping

Ping checks your connection to a specified computer.

2. Notes

Mail

Upgrading Mail from version 4.01 and later to version 4.6
After you have installed Chameleon for Windows version 4.6, you will need to run the Mail conversion utility to upgrade your Mail.
To do this:

1. Backup your e-mail directory (optional, but recommended)
2. Make sure your WIN.INI file has the correct path to your MAIL.CFG file.
3. Choose the Mail icon. A dialog box appears that says:

Your mailbox format must be upgraded. This may take awhile. Please select the following choices:

Yes - Upgrading will proceed.
No - Do not convert. Continue.
Cancel - Exit Mail

* Choose Yes to upgrade Mail. This option automatically runs the Mail conversion program. Your mail will be upgraded when this program completes.

Warning: All mailboxes the conversion program finds will be converted.

* Choose No to open Mail but not proceed with the upgrade. There will be another dialog displaying saying "Existing messages can be converted at a later point using MAILCONV.EXE (4.01 users) and Mail Administration."

This means your existing messages will not be visible, however, you can recover all your messages in your mailbox by running the Mail Administration option, Generate mailbox from message files. If you were using Mail version 4.01, then you should run MAILCONV.EXE,

then run the Mail Administration option Generate mailbox from message files. If you are using Mail version 4.5, then run the Mail Administration option Generate mailbox form message files.

Note: Once the conversion is complete and you have verified the integrity of your database, you may delete your old database by deleting the files [USERNAME].DB and [USERNAME].PX in the user's mailbox directory.

* Choose Cancel if you do not want to upgrade your Mail at this time. Next time you start Mail, you will receive the same prompt again about conversion. Note that you can run the MAILCONV.EXE program independently at a later time if desired. It is located in your C:\NETMANAG directory.

Note: Mail folder names should be 31 characters or less, or the folder name will be truncated to 31 characters.

Mail Administration
When you select Generate mailbox from messages, Mail Administration will scan through the mailbox folder directories and pick up any messages in the mailbox and compose a new database based on those messages that were found. So you may see more messages than what you expected.
SHIFT+NUMLOCK.

Norton Desktop
The Norton Desktop 3.0 File Assist feature is incompatible with some applications including Chameleon. You can make Norton Desktop compatible with Chameleon by following step 1 or
step 2.

1. In Norton Desktop, turn off File Assist in the Options menu. This turns off it off for
   all applications.

2. Or, in the Windows directory, edit the [Compatability] section in the FASSIST.INI file in
   one of two ways:

  a) Turn off File Assist for all applications not registered (listed) in the Compatibility section,
by
     including the line 'Default=0x0088'.

     Example:

     [Compatibility]
     WINPROJ=0x199f
     BRAVO=0x219f
     FAXWORKS=0x099f
     XTALK=0x219f
     PW=0x119f
     Default=0x0088

  b) Turn off File Assist for individual applications by including the line <name>=0x0088 for
each
     such application. For <name>, use the name of the application's executable file, without
the
     .EXE extension.

     Example:

     [Compatibility]

```
WINPROJ=0x199f
FAXWORKS=0x099f
XTALK=0x219f
PW=0x119f
Default=0x019f
; Cham apps
FINGER=0x0088
```

3. Installing Chameleon Internet Starter Kit 4.6

These installation instructions describe how to install Internet Chameleon 4.6 for Windows 3.1 ECCO Internet Address Book 2.0 for the first time or as an upgrade.

New Installation
To install Internet Chameleon and ECCO Internet Address Book for the first time by diskette, start Windows in enhanced mode, and do the following:

1. Insert the Internet Chameleon #1 diskette in the drive of your choice (a:\ in this example).

2. Select the Run... option under the File menu in Program Manager and type: a:\setup. Then   choose the OK button.

3. At the prompts, insert the appropriate diskette and choose the Continue button.

4. At the prompt, remove all diskettes and choose the OK button to reboot. The installation is   now complete.

5. Insert ECCO Internet Address Book Disk #1 in the drive of your choice (a:\ in this example).

6. Repeat steps 2 - 4.

After you have completed a new installation, use Automatic Internet or the Custom application to customize Internet Chameleon's configuration to your environment. For beginning users, it is recommended you use Automatic Internet to configure your system.

Note: Custom will prompt you for a serial number the first time you use the application if you did not enter it via the Others tab in Automatic Internet.

Upgrade Installation

To upgrade from a previous version of Internet Chameleon and ECCO Internet Address Book, start Windows in Enhanced Mode, and do the following:

1. First backup your NETMANAG directory.

2. Quit all Internet Chameleon applications and any other TCP/IP applications.

3. Insert the Chameleon #1 diskette in the drive of your choice (a:\ in this example). Install over the previous Internet Chameleon directory. Do not install over Chameleon or ChameleonNFS.

4. Select the Run... option under the File menu in Program Manager and type: a:\setup. Then   choose the OK button.

5. At the prompts, insert the appropriate diskette and choose the Continue button.

6.   At the prompt, remove all diskettes and choose the OK button to reboot. The installation is   now complete.

7.   Insert ECCO Internet Address Book Disk #1 in the drive of your choice (a:\ in this example).

8.   Repeat steps 4 - 6.
